

# Illinois Climate Education Hub

A hub of trusted resources, vetted by scientists and reviewed by teachers, to help Illinois educators bring climate and sustainability literacy to students across the state.

## You're Not Alone in Teaching Climate

“As an educator, I know how busy teachers are and how challenging it can be to find high-quality and engaging lessons and resources. The Illinois Hub ([illinoisclimateeducation.org](http://illinoisclimateeducation.org)) is a website developed by SubjecttoClimate that provides free climate-education resources and teacher-designed lesson plans across all grade levels and subjects.

A goal of the Hub is to support stronger environmental literacy statewide, as we believe that when students engage with climate change more often in the classroom, they will be empowered to take action within their communities.”

Katie Nahrwold  
Illinois State Lead

## What We Offer to Support Educators:

### Professional Development

Looking to strengthen your climate education skills? Our Professional Development offerings include a wide range of courses focused on climate science, teaching strategies, and region-specific topics.

### Climate Change Explainers

Want to build your own climate knowledge? Our Climate Change Explainers, developed in collaboration with MIT Climate Solutions, break down key concepts to help you feel more confident in the classroom.

### Teacher Guides

Each guide brings together trusted resources and practical tips for K–12 educators on a variety of topics—from introducing climate concepts in early childhood classrooms to navigating conversations around climate anxiety with older students.
